	CERTIFICATIONS			STANDARDS					DECLARATIONS					

Cradle to Cradle (C2C) - Cradle to Cradle Certified™ is a globally recognized measure of safer, more sustainable products made for the circular economy. To receive certification, products are assessed for environmental and social performance across five critical sustainability categories: material health, material reuse, renewable energy and carbon management, water stewardship, and social fairness. A product is assigned an achievement level (Basic, Bronze, Silver, Gold, Platinum) for each category.

GREENGUARD Gold - The GREENGUARD Gold Certification standard includes health-based criteria for additional chemicals and also requires lower total VOC emissions levels to help ensure that products are acceptable for use in environments like schools and healthcare facilities. GREENGUARD Gold Certified products must also comply with requirements of the state of California’s Department of Public Health (CDPH) “Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers, Version 1.2 (2017)” (also known as California Section 01350).

Declare Label - This label provides all material ingredient information while also identifying products as Red List Compliant. The label automatically places red list compliant products into consideration for the Living Building Challenge (LBC).

RoHS - Restriction of Hazardous Substances compliance; Compliant products do not exceed the allowable amounts of 10 restricted substances, including hard metals and lead.

NFPA 701 - The National Fire Protection Association Standard Method of Fire Tests for Flame Propagation of Textiles used in free hanging applications. This is the most common fire standard used for roller window shades in the US.

California Title 19 (CA 19) - Fire standard required for roller window shade fabrics that will be used in the state of California. The California State Fire Marshal has mandated compliance with this standard, which relates to fire and life safety regarding occupied spaces.

LBC Red List Compliant - The Living Building Challenge (LBC) Red List represents the “worst in class” materials, chemicals, and elements known to pose serious risks to human health and the greater ecosystem that are prevalent in the building products industry. Compliant products do not contain any red list substances.

ASTM G21 - The most common standard method for fungal resistance on textiles, plastics, and other hard surfaces.

ASTM E2180 - The most common standard method for antimicrobial effectiveness on textiles, plastics, and other hard surfaces.

Heath Product Declarations (HPD) - A product report, based on the HPD Open Standard, which includes chemical ingredient disclosure and associated health information. Product ingredients are listed by percentage of weight to 100 ppm.

Made in USA - According to the Federal Trade Commission, “Made in USA” means that “all or virtually all” the product has been made in America. That is, all significant parts, processing and labor that go into the product must be of U.S. origin.
